THE IO
FOUNDATION

CRYPTO*i*FUND

by TIOF

While the world marvels with the eruption of fascinating technologies such as AI or cryptocurrencies, there are still pressing matters for Communities all over the world to catch up with fundamental concepts such as Human rights, digital literacy or to equiparate their purchasing power with 1st World populations.

These target Communities are more often than not left out of the equation, a situation pretty much in conflict with UN's SDGs which only increases their economic and technological gaps.

CryptoFund is a participatory program designed for underdeveloped Communities with their active input to tailor both its final design and its implementation. It seeks bringing together Organizations, Stakeholders and Partners so that they are all equally involved in boosting local development.

The **CryptoFund** program, in its current implementation, is the result of a joint effort between **The IO Foundation (TIOF)** and **Communities First (CF)**, a Community Development nonprofit in the Philippines.

Note: In the context of this document, "Partner" refers to the receiving end of a donation. Traditionally, the terms "Recipient" and "Beneficiary" have been used, unintentionally inferring a sense of passivity. "Partners" reflects a more inclusive and active participation.

A LONG LASTING PROBLEM

CRYPTOFUND AT WORK

CRYPTOFUND PROJECT

The **CryptoFund** project is implemented in collaboration with **COMMUNITIES FIRST**

- **TIOF** provides the necessary experience and tech support.
- **CF** provides their experience in Community engagement and implements the project on site.

IDENTIFICATION OF COMMUNITIES VIA PARTICIPATORY WORKSHOPS

CF identifies Communities **engaged** in growing together with the future. Participatory workshops are conducted to fine tune the syllabus of the program so that it matches the Community's needs.

PURCHASE OF CRYPTOS PORTFOLIO

TIOF acquires a portfolio of existing Cryptocurrencies on behalf of the Community. From day 1, the Community is the legal owner of these crypto assets. **TIOF** works as its warrantor for the length of the program.

TRAINING

CF implements the **CryptoFund** training program with the support of **TIOF**.

INFO TECH, HUMAN RIGHTS, DIGITAL RIGHTS, ECONOMICS & CRYPTOCURRENCIES

The training consists of a set of topics that are relevant to the objectives of **CryptoFund**.

EXAMINATION

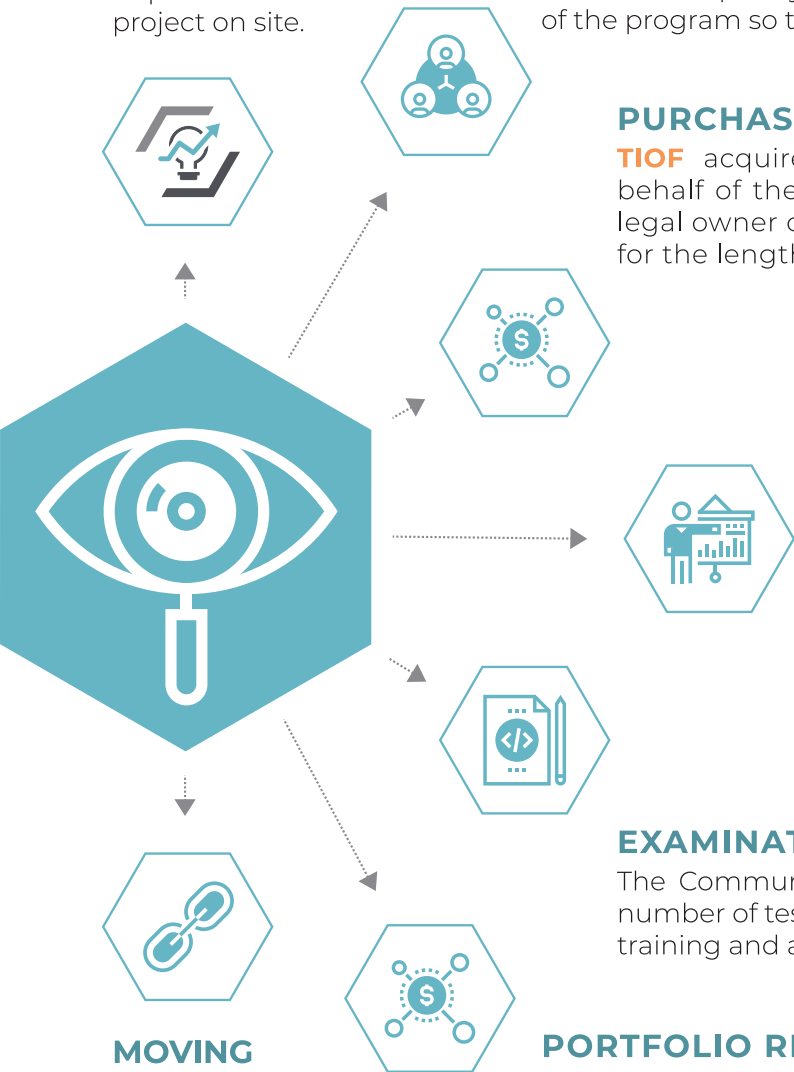

The Community, both as individuals and as a whole, passes a number of tests and evaluations. These are performed during the training and as a final examination at the end of it.

PORTFOLIO RELEASE

TIOF releases their private keys of the crypto assets. The Community is then ready to know how to handle those and act adequately on their usage.

MOVING FORWARD

Both **TIOF** and **CF** remain at the service of the Community for any future assistance.

THE LONG TERM VISION

CryptoFund is a project aimed to help Communities around the world, not only in its intended initial ground, the Philippines and Malaysia.

OPENING OF THE PROJECT

The project guidelines will be published under Creative Commons license so that other organizations and Communities can benefit from its model.

OUTREACH

Organizations around the world that are identified as having a similar ongoing work will initially be contacted.

The project will also be publicized in relevant channels.

OTHER ORGANIZATIONS

Organizations can reach TIOF and CF to establish implementation partnerships or advice on how to implement themselves.

COMMUNITIES AROUND THE WORLD

Implementing organizations and Partner Communities will become part of a map that will showcase where is CryptoFund implemented. This will enhance even more the implementation knowledge and hopefully will bridge.
